AI CRISIS INSIGHTS

The Afghanistan Humanitarian Needs and Response Plan 2026 is assessed as **Critically Underfunded** because it has received only $214.2 million of its $1.71 billion requirement — a mere 12.5% funding rate — leaving over 21.8 million people in need without adequate support. This dire shortfall is compounded by a declining funding trend that signals worsening donor disengagement over time, while severe education deprivation affecting the population indicates that critical long-term recovery sectors remain chronically neglected. The sheer scale of the impacted population further stretches the limited available resources to a breaking point, making meaningful humanitarian response across Afghanistan virtually impossible without a dramatic and urgent increase in international financial commitment.
